## Professional Summary

Early-career Cloud DevOps engineer and Computer Engineering graduate with hands-on project and internship experience in AWS cloud infrastructure, Linux/Bash scripting, containerization (Docker, Kubernetes), and CI/CD pipeline automation via GitHub Actions. Proficient in deploying and managing AWS compute, storage, networking, and managed services including EC2, S3, IAM, RDS, and Lambda. Experienced with Infrastructure as Code principles, microservices architecture, and observability tooling (Prometheus, Grafana). Strong analytical and problem-solving skills with a proven ability to learn and apply new tools quickly. Eager to contribute to cloud operations, SRE, and infrastructure automation in a team-oriented DevOps environment.

## Technical Skills

**Cloud Platforms (AWS):** EC2, S3, IAM, RDS, Lambda, Elastic Beanstalk, Elastic Block Storage, Security Groups, VPC, CloudWatch, CloudTrail

**DevOps & CI/CD:** GitHub Actions, CI/CD pipeline design and optimization, automated build and deployment workflows, version control with Git & GitHub

**Infrastructure as Code (IaC):** Terraform (learning), Docker Compose, container networking & port mapping; IaC principles and security misconfiguration awareness

**Containerization & Orchestration:** Docker, Kubernetes, multi-container application management, container security hardening, microservices architecture

**Operating Systems & Networking:** Linux (Ubuntu, Amazon Linux), Bash/Shell scripting; TCP/IP, HTTP/HTTPS, DNS, load balancing, firewall and Security Group configuration

**Monitoring & Observability:** Prometheus, Grafana; real-time metrics dashboards, alerting, and resource utilization tracking

**Programming & Scripting:** Bash, Shell scripting, JavaScript, HTML, CSS, MySQL

**Web & CMS:** Nginx, WordPress, Elementor, Sketch

## Professional Experience

### Infosys BPM

March 2025 – Present

*Senior Process Executive – Digital Designer*

*Pune, Maharashtra*

- Collaborate with cross-functional development and operations teams in an Agile environment to translate project requirements into deployable deliverables.
- Enforce version-controlled design and delivery workflows that reduce revision cycles and accelerate deployment timelines, contributing to faster and more reliable software delivery processes.
- Maintain process documentation and communicate infrastructure and deployment changes to stakeholders, ensuring full visibility into project status and technical improvements.

### Psyber Technologies

August 2024 – January 2025

*WordPress & Front-End Web Development Intern*

*Remote*

- Managed cloud-hosted infrastructure for 5+ live production websites, configuring hosting environments, implementing maintenance automation, and sustaining 99% availability through proactive uptime monitoring.
- Automated deployment and configuration workflows for web environments, reducing manual provisioning effort and streamlining application delivery across the full development lifecycle.
- Optimized application performance through technical tuning and front-end engineering, driving a 20% increase in organic traffic and 15% improvement in search rankings within 3 months.
- Coordinated with multi-disciplinary teams to communicate infrastructure updates and align technical delivery with business objectives, demonstrating strong collaboration and communication skills.

### Skill Vertex

February 2023 – March 2023

*Web Development Intern*

*Remote*

- Built and deployed a full-stack interactive web application using HTML, CSS, JavaScript, and MySQL; optimized backend database queries to improve reliability and boost user engagement by 30%.
- Completed end-to-end project lifecycle — from development through deployment — within the internship window, achieving 100% on-time milestone delivery.

## Projects

### AWS S3 Portfolio Deployment with GitHub Actions CI/CD

[GitHub Repository](#)

- This project demonstrates Automated static portfolio deployment to Amazon S3 using GitHub Actions on every push to the main branch.
- Implemented a CI/CD pipeline to eliminate manual website file uploads and streamline deployments.
- Configured secure AWS authentication using GitHub Secrets for S3 deployment.
- Reduced deployment time by automatically syncing the latest website changes to the S3 bucket.

2-Tier Application Deployment on AWS Using Terraform

[GitHub Respository](#)

- This project demonstrates how to deploy a 2-tier application architecture on AWS using Terraform.
- The infrastructure is provisioned using Infrastructure as Code (IaC) principles, allowing cloud resources to be created, managed, and maintained in a repeatable and automated way.
- The project includes AWS networking, compute resources, database infrastructure, domain configuration, SSL certificates, and remote Terraform state management.

AWS Cloud Infrastructure Provisioning & Nginx Web Server Deployment

[GitHub Respository](#)

- Provisioned and configured an AWS EC2 Linux compute instance using Bash automation scripts aligned with Infrastructure as Code principles; managed SSH key-pair access, IAM security group rules, and least-privilege inbound traffic policies.
- Automated end-to-end server setup and Nginx web server deployment via shell scripting, reducing manual provisioning time by 60% and achieving 99% deployment uptime across environments.
- Configured AWS Security Groups and VPC-level network controls (HTTP/HTTPS, TCP/IP) to enforce least-privilege access, demonstrating practical cloud networking and security fundamentals.

Containerized Multi-Tier Application Hosting on AWS EC2 with Docker

[GitHub Respository](#)

- Designed and deployed a containerized multi-tier application (WordPress + MySQL) on AWS EC2 using Docker and Docker Compose as an Infrastructure as Code approach, cutting deployment effort by 70% through container orchestration.
- Configured inter-container networking, port mapping, and AWS Security Groups to deliver a 100% functional, production-ready application with MySQL database integration and full uptime.
- Hardened the container environment by isolating services within internal Docker networks, restricting external exposure and applying microservices architecture and container security best practices.

Education

|------------------------------------------------|--------------------|
| SNJB College of Engineering, Chandwad          | 2020 – 2024        |
| Bachelor of Engineering – Computer Engineering | Maharashtra, India |
| Sanjivani K.B.P. Polytechnic, Kopargaon        | 2016 – 2019        |
| Diploma in Mechanical Engineering              | Maharashtra, India |

Achievements

- Reduced manual cloud infrastructure provisioning time by **60%** on AWS EC2 through Bash/Shell automation scripts, directly improving deployment speed and reliability.
- Maintained **99% uptime** on self-managed AWS EC2 cloud environments through proactive security group configuration and Linux server health management.
- Eliminated **70% of manual deployment effort** by containerizing a full multi-tier application stack using Docker on AWS EC2, demonstrating IaC and automation principles.
- Drove a **20% increase in organic web traffic** and **15% improvement in SEO rankings** through cloud-hosted performance optimization at Psyber Technologies within 3 months.
- Improved web application user engagement by **30%** through optimized MySQL backend queries and streamlined front-end delivery.
